PROFILE

Frontend Developer with 1.5+ years of commercial experience in React (TypeScript and JavaScript) across a multi-brand platform (30+ locales), a regulated online casino, a multi-module CRM and a healthcare application. Ship product features and UI across the whole frontend: components, state management, API integration and responsive layouts, while keeping performance and code quality high (Lighthouse 100, main bundle cut by 45%). Comfortable making backend changes in NestJS and Spring Boot. Used to working in cross-functional teams of up to 7 engineers with designers and product owners. Based in Wrocław, open to remote.

CORE STACK JavaScript / TypeScript • React • Next.js • Astro • Redux Toolkit • Tailwind CSS • HTML / CSS • Node.js

WORK EXPERIENCE

Full-Stack Developer, TenThousand

Sep 2026 – Present (full-time)

IT outsourcing company — client project: multi-brand consumer web platform, 30+ locales (under NDA). Team: 7 engineers (frontend and backend), designers, product owners

Astro SSR, TypeScript, Tailwind CSS v4, Alpine.js, Node.js, Java / Spring Boot, Cloudflare, Sentry

- Shipped features and fixes across an Astro/TypeScript monorepo and its Spring Boot backend, e.g. fixed framed QR codes that rendered broken in Safari and in PNG/JPEG exports by embedding the code as a nested SVG instead of a foreignObject; also fixed a production error found through Sentry, where quotes in translations broke Alpine.js expressions.
- Built custom highlight colors for CMS-edited rich text end to end: Spring Boot validation, server-side rendering that allows only strict hex values into inline styles, and rules for the LLM translator.
- Moved the shared client JavaScript (15 modules, ~4.6k lines) out of the Spring Boot app into a frontend package, then deleted the backend copy after checking CDN analytics.
- Launched 8 A/B and painted-door tests on landing pages, funnels and paywalls with the in-house experiment framework, keeping the control arm byte-identical, and cleaned up 9 finished experiments by removing the losing variant and its wiring.
- Redesigned the flagship site's footer with a language picker for its 32 locales (reused in the shared footer of four other brand sites) and added a build-time check that fails when a site's locales, translation bundles and language names disagree.

Freelance Frontend Developer

May 2025 – Present (freelance)

Websites built to order: VM Design (interior architecture studio) and Grosters

vmdesignproject.com • *grosters.com*

Astro, TypeScript, OGL (WebGL), sharp, SASS, vanilla JavaScript, GitHub Actions, Cloudflare Workers, Python

- **VM Design:** built a multilingual (EN/FR/IT/RU/UK) Astro site with Zod-typed Markdown collections: 22 projects, 216 static pages (165 indexable) and an astro:assets / sharp image pipeline producing 4,500+ AVIF/WebP variants; Lighthouse 100 in all four categories on desktop, 96+ Performance and 100 in the rest on mobile, CLS 0.
- **VM Design:** wrote interactive components in vanilla TypeScript (before/after slider, carousel, native-dialog lightbox, WebGL gallery on OGL); replacing a React island cut gallery JS from ~290 KB to 65 KB (−77%).
- **VM Design:** implemented technical SEO across five locales: localized meta, canonical + hreflang, i18n sitemap, JSON-LD (ProfessionalService, BreadcrumbList, CreativeWork) and 1,384 translated image alt texts.
- **VM Design:** set up CI/CD from GitHub Actions to Cloudflare Workers with a custom domain, DNS and long-term asset caching; generated SVG region maps from GeoJSON (no map library) and a Python pipeline that redacts client data from 199 PDF drawing sheets.
- **Grosters (grosters.com):** shipped a 4-page mobile-first commercial site solo, from requirements to production; optimized images and loading — Lighthouse 99 Performance / 100 Best Practices / 91 Accessibility (LCP 0.8 s, CLS 0).

Frontend Developer, Slotstars

Jun 2026 – Oct 2026 (part-time)

Regulated online casino (under NDA): 3 brands in one monorepo; licences UKGC, DGOJ (Spain), Sweden, MGA. Team: 1–2 developers, QA, PM

React 19, TypeScript, React Router v7, Redux Toolkit / RTK Query, Tailwind CSS v4, i18next, Vite, SkillOnNet API

- Delivered 38 merged PRs in four months (196 files changed): Figma-to-code UI, mobile layouts and QA fixes across the lobby, jackpots, VIP, promotions and game-category pages.
- Prepared the Swedish market launch: market-level feature flags that remove unavailable sections (welcome bonus, live casino) from routes, navigation and sitemap, Swedish currency formatting, and a fix for SkillOnNet web components serving English legal documents.
- Fixed an i18next initialization race that left raw translation keys in the navigation on 46 of 50 cold page loads (92%).
- Consolidated typography into one named scale (57 arbitrary font sizes removed), raised mobile touch targets to 44px and fixed an iOS Safari sticky-header flicker.

Frontend Developer, Emdula

Jan 2026 – Aug 2026 (full-time)

Multi-module CRM platform for real-estate agencies (pre-release). Team: developers, QA, designers, product owner

React 19, JavaScript (JSX), React Router 7, Vite, Tailwind CSS, CSS Modules, Radix UI, i18next, TipTap, Axios

- Cut the main JavaScript chunk by 45% (621 KB to 341 KB gzip) and first-load JS by ~48% by moving 33 pages to React.lazy + Suspense, with a chunk-load error boundary and idle-time prefetching.
- Made react-hooks/exhaustive-deps and rules-of-hooks errors and cleared the ESLint backlog (225 problems to 0) across 92 files; reorganized 53 root-level components into 21 domain-based folders.
- Rebuilt the deal details view from Figma: activities, notes CRUD and linked-property sections with scroll-spy navigation (IntersectionObserver).
- Fixed 15 defects across Deals, Properties, Profile, Contacts and Documents, e.g. timezone-shifted activity times and HEIC / oversized photo uploads (client-side JPEG compression, HTTP 413 handling); moved hard-coded strings to i18next (EN/UK).

Full-Stack Developer Intern, ZenBit

Mar 2026 – May 2026 (part-time)

Clinical data de-identification platform for healthcare providers (under NDA). Team: 4 developers

React 19, TypeScript, MUI, Redux Toolkit, react-hook-form + yup, NestJS, TypeORM / MySQL, JWT, Swagger

- Built passwordless magic-link authentication end to end: a NestJS auth module (2 REST endpoints, TypeORM migration, single-use 256-bit tokens, JWT issuance, Swagger docs) and the React sign-in / verify flow with react-hook-form + yup.
- Built the UI of a 4-step clinical-data de-identification wizard: custom stepper synced with the sidebar via Redux Toolkit, upload validation (5 MB / 250k characters) with progress feedback and responsive styling.
- Developed the app shell (dashboard layout, collapsible sidebar, top bar, support modal) and dashboard page for desktop and tablet; handled JWT session expiry with a 401 interceptor guard and a Session Expired page.

EDUCATION

B.Sc. in Cloud Application Development

Oct 2023 – Jun 2026

Uniwersytet WSB Merito Wrocław · Wrocław — graduated with honours

- Key coursework: Web Development, SQL Databases, Cloud Computing, Linux Systems, Algorithms

Full-Stack Development Program, GoIT

Feb 2025 – Nov 2025

IT School GoIT, intensive program: React, TypeScript, Next.js, JavaScript, Node.js, Express.js

SKILLS

FRONTEND: JavaScript / TypeScript, React, Next.js, Astro, Redux Toolkit / RTK Query, Tailwind CSS, HTML5 / CSS / SASS, MUI, Swiper; i18n / localization (i18next), performance optimization, responsive design, accessibility

TOOLS: Git, GitHub, pnpm / npm (workspaces, monorepo), Vite, ESLint, Prettier, Chrome DevTools, Lighthouse / PageSpeed Insights, Postman, Swagger / OpenAPI, Sentry, Figma, Agile / Scrum, Jira, Linear, Claude Code

CLOUD / DEVOPS: Azure, Cloudflare (Workers, DNS, CDN analytics), Vercel, Docker, CI/CD (GitHub Actions)

BACKEND: Node.js, NestJS, TypeORM / MySQL, REST API, JWT auth; Java / Spring Boot (working knowledge)

LANGUAGES & CERTIFICATES

Languages: Ukrainian (native) • Russian (fluent) • English (C1) • Polish (intermediate)

Certificates: EF SET English Certificate (C1) • Claude Code 101 (Anthropic)
